Summary

Software Development Engineer with **2+** years of experience designing, building, and shipping production systems end-to-end. Comfortable across the stack — **React/Next.js** on the frontend, **Go** and **Node.js** on the backend, **PostgreSQL/Redis** for data, and **GCP/AWS/Kubernetes** for infra. Track record of shipping features with **99.9%** uptime, reducing **p95 latency** by **40%**, and supporting **1K+** RPS workloads through clean architecture and **CI/CD**.

Technical Skills

Languages: Go (Golang), Python, JavaScript, TypeScript, SQL, Java, HTML, C, C++

Frameworks & Libraries: React.js, Node.js, Express.js, Next.js, Tailwind CSS

Cloud & Infrastructure: Google Cloud Platform (GCP), AWS (EC2, S3, RDS, CloudFront), Azure, Terraform (IaC), Docker, Kubernetes, Linux

Databases: MySQL, PostgreSQL, MongoDB, Firebase, Redis (Caching)

DevOps & Tools: Jenkins, Git, GitHub Actions, CI/CD Pipelines, Monitoring (Prometheus, Grafana)

Other Skills: Data Structures & Algorithms (DSA), Low-Level Design (LLD), High-Level Design (HLD), System Design, Object-Oriented Programming (OOP), Design Patterns, Distributed Systems, Microservices, RESTful API Design, gRPC, WebSockets, High Availability, Observability, SQL Optimization, Agile/Scrum, Test-driven Development

Experience

Bluecopa

Software Development Engineer

Remote, India

Mar 2026 – Present

- **Developed** end-to-end features using **React**, **Next.js** (App Router), and **Go** microservices, shipping user-facing functionality to production on a bi-weekly release cadence.
- **Designed** and implemented Go-based **REST APIs** with clean architecture and concurrency patterns (**goroutines**, **channels**), reducing **p95 API latency** by **40%** and supporting **1K+** RPS.
- **Built** responsive, SEO-optimized UIs in **Next.js** with SSR/ISR, improving Lighthouse performance scores to **95+** and reducing Time-to-Interactive by **35%**.
- **Integrated PostgreSQL** and **Redis** for data persistence and caching, cutting repeat query load by **60%** and improving throughput for high-traffic endpoints.
- **Collaborated** in an agile team on code reviews, system design discussions, and **CI/CD** improvements, accelerating deployment velocity by **50%**.

Discover.ai

Software Development Engineer (Contract)

Remote, India

Jan 2026 – Apr 2026

- **Built** a full-stack AI-powered social media analytics dashboard (**Next.js**, **Go**, **PostgreSQL**) aggregating data from **5+** platforms, giving brands real-time visibility into **10K+** daily social signals.
- **Engineered** multi-platform scrapers in **Go** and **Python** to collect social media content at scale, processing **50K+** posts/day with fault-tolerant retry logic and rate-limit handling.
- **Designed** and integrated AI review agents using LLM APIs to auto-analyze brand sentiment, competitor activity, and content performance — reducing manual review time by **70%**.
- **Architected** backend microservices with **Go** (Gin) and deployed on **GCP Cloud Run** with Terraform-managed infra, achieving **99.9%** uptime and **auto-scaling** under variable scraping loads.
- **Developed** reusable **TypeScript/React** component library for campaign-detail and analytics views, cutting UI development time for new features by **30%**.

Implere Tech

Software Engineer

Hyderabad, India

Oct 2025 – Feb 2026

- **Engineered** and launched **cloud-native infrastructure** using **GCP**, **Kubernetes**, and **Terraform**, ensuring **99.9%** uptime for production systems.
- **Automated** infrastructure provisioning and **CI/CD pipelines** using **Jenkins** and **Terraform**, reducing deployment time by **85%**.
- **Spearheaded** the implementation of **Prometheus/Grafana monitoring**, leading to a **45%** decrease in average alert resolution time and a **25%** reduction in critical incidents per quarter.
- **Optimized** resource utilization through **auto-scaling** and cost monitoring, improving performance by **20%** and cutting overhead by **30%**.

Cognizant Technology Solutions

Programmer Analyst

Bangalore, India

Dec 2024 – Sep 2025

- **Built** and deployed scalable applications on **Azure**, serving **1K+** active users with **high availability**.
- **Containerized** services with **Docker/Kubernetes**, improving deployment reliability and enabling **zero-downtime** rollouts.
- **Developed RESTful APIs** and integrated **SQL databases**, enhancing performance and cutting API latency by **45%**.
- **Streamlined** server configurations using scripting and **CI/CD pipelines**, reducing manual operations by **50%**.

Projects – Building Innovation from Scratch

Distributed E-Commerce Aggregation System

GitHub

Node.js, Redis, Bull Queue, WebSockets, Firebase

- **Architected** from scratch a distributed aggregation platform integrating **5+** e-commerce APIs, processing **500+** requests/min with **99.5%** success rate using fault-tolerant design patterns.
- **Engineered** async processing pipeline with **Node.js** workers, **Bull queue**, and **Redis**, implementing **circuit breakers** and exponential backoff for maintaining **99%+** availability.
- **Implemented** multi-layer caching strategy with intelligent invalidation, reducing external API calls by **70%** and improving response time by **40%**, saving **\$5K/month** in API costs.
- **Built** real-time **WebSocket** communication for **1.5K+** products price comparison, enabling customers to make data-driven purchasing decisions.

AI-Powered Restaurant Platform (Production System)

Live

React, Node.js, MongoDB, OpenAI API, GCP, Twilio

- **Developed** an end-to-end contactless food ordering system from ideation to production, reducing order processing time by **80%** and increasing operational efficiency by **15%** for **10K+** customers.
- **Integrated GPT-4** with **RAG architecture** to enable restaurant owners to query business analytics with **90%+** accuracy.
- **Deployed** on Google **Cloud Run** with **Cloud CDN** and **Load Balancing**, achieving **<100ms** latency globally and handling **500+** concurrent orders during peak hours.
- **Implemented** event-driven notifications using **Pub/Sub** and **Twilio**, processing **1K+** messages/hour across WhatsApp, SMS, and Email **channels**.

Education

KIET Group of Institutions (AKTU)

Ghaziabad, India

Bachelor of Technology in Computer Science and Engineering

Aug 2020 – May 2024

Key Coursework: System Design, Data Structures & Algorithms, Database Systems, Operating Systems, Computer Networks

Certifications

- **Microsoft Certified: Azure Data Scientist Associate** – Apr 2024
- **HackMol 4.0 (NIT Jalandhar)** – Hackathon Participant (Feb 2023)
- **Open Source Contributor** – Active contributions to distributed systems projects on GitHub
